# About Aiten Robots

Provider of light and small-scale industrial handling robots

## About AiTEN

Suzhou AiTEN Intelligent Technology Co., Ltd., was founded in 2017 in the City of Suzhou, Jiangsu Province, by a group of engineers with 15 years' experience in the forklift industry. The Company is dedicated in designing and manufacturing of autonomous mobile robot(AMR) for intralogistics industry. Based on its commitment to innovation and customer-oriented spirit, AiTEN has become one of the few manufacturers that own a complete product line covering all functions needed by intralogistics automation.

## R&D

Aiming to be one of the leading AMR system integrators, AiTEN has created a strong R&D team led by scientists from Singapore Science and Technology Research Bureau, UCD postdoctoral students in the United states, senior professors from Zhejiang University and experts with solid academic background in supply chain.

## Global Vision

Playing an active role in the industry automation worldwide has always been AiTEN's vision. The fast-growing brand awareness and high praise from international big names in different sectors in China further motivated the Company to go to international market. By the end of 2022, AiTEN had successfully served clients from 16 countries by giving not only robots with good quality and competitive price, but also the high standard service to improve the customer experience.

AMRs in the market

2100+

customers

500+

Honors

70+

## Global Kanban

Intelligent logistics scheduling platform

The interface style can be customized according to customer's demand

- Instant collection and storage of equipment information like task performance and status of battery for real time
- inquiry Simultaneous multi-user login and programming in different control terminals
- Fast failure detection followed by automatic task storage and recovery

## Smart Traffic Management

Routes optimization achieved by paths monitoring, task prediction and real time adjustment of traffic control strategy in peak hours based

## Intelligent Task Assignment

The first-come-first-served or task reprioritization tactics are evaluated based on the principle of resource optimization by analyzing historical data. Actions like automatic standby or task pre-response will follow accordingly.

## Multiple Workspace Management

Comprehensive fleet manager can handle a number of equipment and robot operations in different workspaces

## Peripheral Devices

Stable communications with calling device, charging facility, automatic door, elevator and roller conveyor, etc

## Customizable User Interface

Location management | Material management | Device connection | Rule list | Task list | Code-scanning | User Management | Role management | Setting | User login

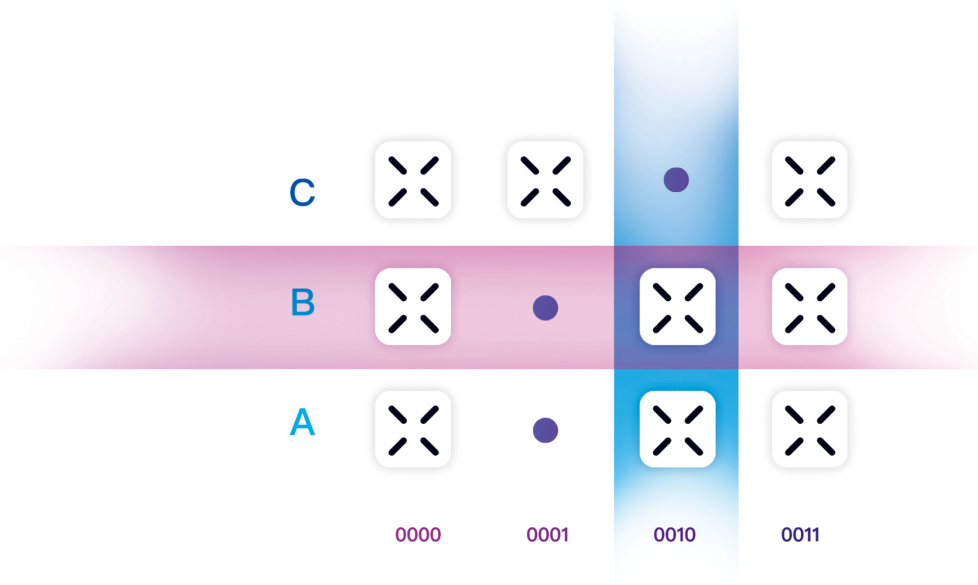

## Multiple Inbound /Outbound Principles

First in first out | First in last out | Random positioning

## Overall Monitoring

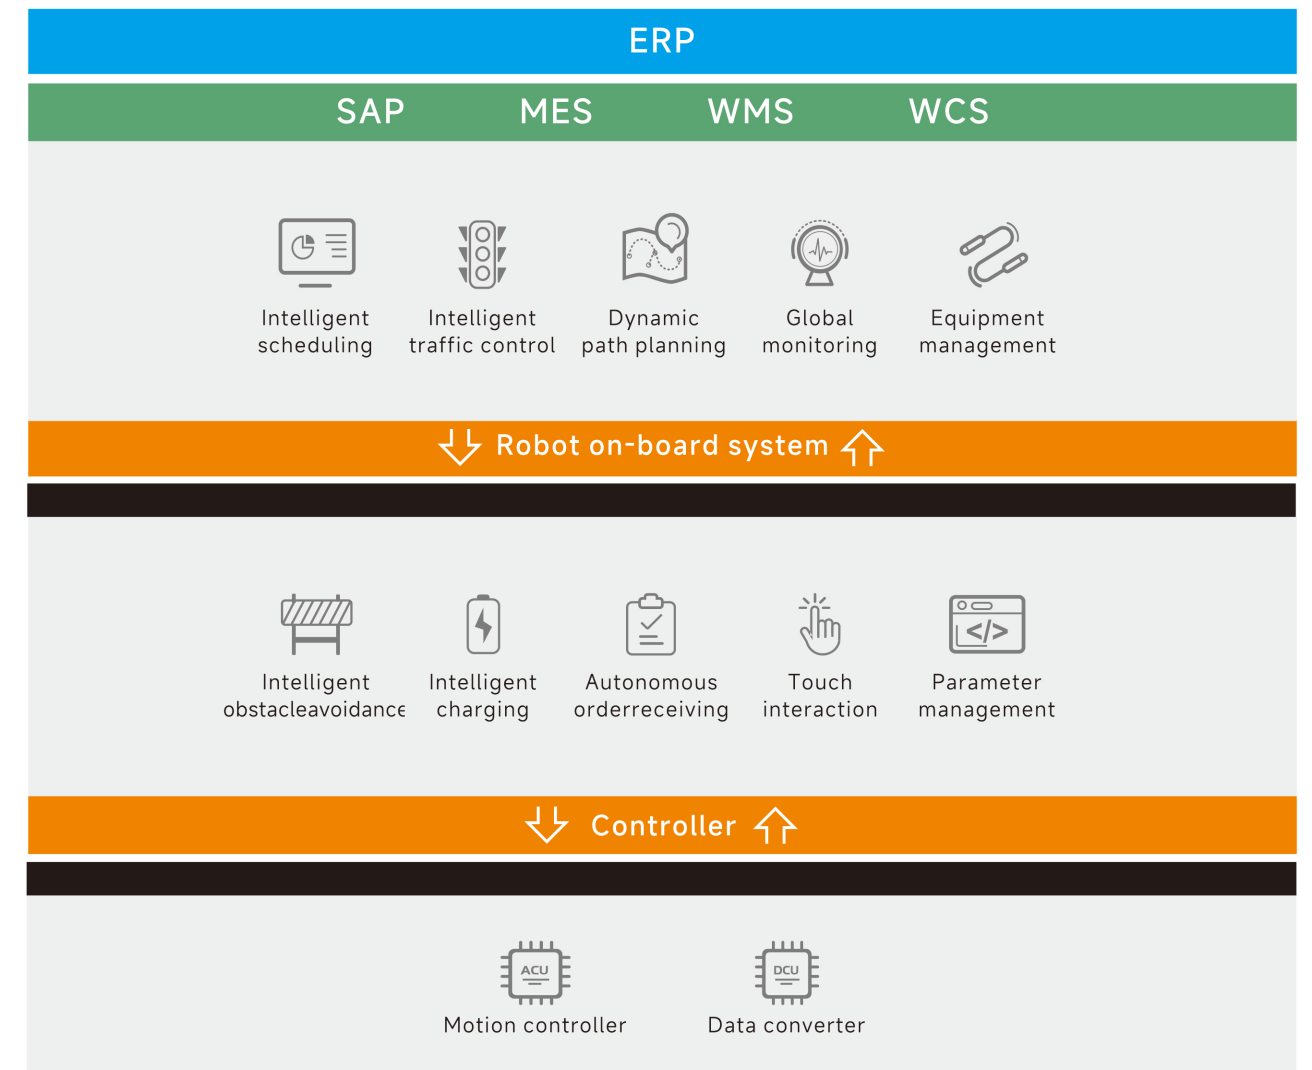

Plating a connection role between the upper MES and the lower robot system, the location system keeps an accurate record of the material flow and assigns task to robot system in accordance to the warehouse location conditions

## Function Module

## Solution

# Handling Robot

- Narrow aisle operation
- Automatic charging
- Safe distance 5m
- Positioning accuracy ±10mm

**Purpose:** Handling and stacking of material.  
**Features:** SLAM laser navigation, laser anti-collision, lithium battery power, automatic charging, position detection, etc.

# Delivery Robot

- Narrow aisle operation
- Automatic charging
- Laser anti-collision
- Positioning accuracy ±10mm

**Purpose:** Moving of light materials.  
**Features:** SLAM laser navigation, laser anti-collision, lithium battery power, automatic charging, position detection, etc.

# Storage Robot

- Automatic charging
- Safe distance 5m
- Positioning accuracy ± 10mm

**Purpose:** Handling material in large storage centers  
**Features:** SLAM laser navigation, laser anti-collision, lithium battery power, automatic charging, position detection, etc.
